

# GREEN HORIZON

BUILDING SUSTAINABLE FUTURES OF MANKIND AND EARTH

# Welcome To Our Green House

Empowering a Sustainable World and Eco-future  
Signifies empowerment and action towards making organizations, industries, and homes more renewable while controlling carbon emissions and creates a harmonious synergy towards sustainability. It emphasizes on controlling carbon emissions, financially sustainable initiatives and focused on renewable energy-based construction.

# Our mission

01.

We help establish a means of communication with the providers who provide energy using renewable sources like solar panels, wind turbines, or hydropower. By doing so, one can directly replace fossil fuels in their operations, reducing carbon emissions.

02.

We promote environmental sustainability by reducing greenhouse gas emissions, conserving resources, preserving biodiversity, and ensuring a long-term, clean energy supply.

03.

We help raise awareness in communities which encourages eco-friendly practices and advocate for sustainable energy choices.

04.

Green energy proves beneficial by harnessing energy from sources like sunlight and wind, which leads to a decrease in air pollution and dependency on finite fossil fuels, ultimately advancing sustainability and the well-being of our planet.

82%

# Community projects

We develop community renewable energy projects where multiple residents or businesses share the benefit of a single solar installation making solar power and other renewable energies accessible to a wider audience.

# Meet Our Expert Team

## Arpit Goel

Team Leader, Project  
Manager, UI/UX designer

## Kashish Gupta

Co-Leader,  
Website Developer

## Hargun Kaur

Research analyst,  
data scientist

## Simran Kaur

Qa Engineer

Our team has united and collaborated cohesively to create the platform and tackle the problem. We pooled together our diverse skills, communicated effectively, and collectively contributed to the project's success, fostering a collaborative and productive work environment.
